

Electronic Cylinder with UL Mortised Controller

This product can record up to 1000 transactions in a high traffic area.

INTELLIKEY is one of the most advanced access control systems available today. Designed around state-of-the-art electronics, the Electronic Cylinder with UL Mortised Controller can be used with Fire-rated doors, or non-fire-rated doors. This system is mortised in the door for enhanced security and aesthetics.

INTELLIKEY was designed as a retrofitting, stand-alone system. This means that the electronic lock controller works with your existing locking hardware, preserving your security investment while providing enhanced access control. The cams included in this system are for use with Corbin Russwin®, Yale®, Sargent®, Adams Rite®, and Schlage® locks.

This system has a stand-alone controller that can record an audit trail up to 1000 transactions. The cylinder provides the link between the INTELLIKEY controller and the intelligent key via encrypted infrared communication.

System Applications

- Stand-alone controller
- Built-in real time clock and calendar with DST adjustment
- Battery Operated (line power optional)
- Patented process protects against electrostatic discharge
- Retrofits all standard mortise locksets and most rim cylinder applications

Description	Part Number	Finish
